Fixed schedules do not transfer: same family, opposite outcomes

(a) Concat (CogVideoX-5B-I2V): skipping early steps HELPS

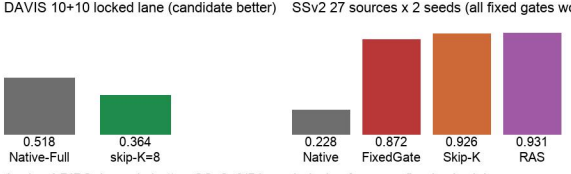

best K=10, -28% anchor error

(b) Mask (VACE-1.3B): the SAME skip HURTS

best K=1; K=12 gives +93% anchor error

(d) Same interface (CogVideoX concat), same schedules: DAVIS vs SSv2

Anchor LPIPS, lower is better. SSv2: 0/54 seeded wins for every fixed schedule.
Frames in (a)-(c) are real generations from the executed interface diagnostics; (d) plots Tables 2-3.

(c) Token (LTX-Video):
vacuous wall, 0.040+/-0.009
